NEW MALEM PRICES - 2006

It a long time since prices of Malem products changed. An increase is now needed. The cost from our supplier has increased and the exchange rate has changed making the \$A price more. From May 1st 2006 prices increase by around 10%. Malem Medstat is in no doubt that Malem devices are good value. They are effective, robust and children are attracted to the designs.

NEW PRODUCT

.....
**A WATCH THAT
GIVES AN
ALERT**

other things eg take
medication.*

The Malem

Vibro Watch

***... now
available in
Australia***

Vibro-watch

There has been a need for a long time for an alerting system to tell children or adults when it is time to go. and before there is wetting - 'timed' and "prompted" voiding
(Rigby,
*The overactive bladder
Nursing Standard, June
11, 2003*)

Dr Helal Malem has now designed the **Vibro-watch** for this function. The Malem Vibro-watch is easy to use and is attractive to wear as a watch to tell the time. The Vibro-watch vibrates at the wrist - to alert child, parent or other person that it is time to go to the toilet, to take medications, to take some exercise, etc. The watch can be set to vibrate at specific intervals to match the needs of the person eg it can be set to change the interval between going to the toilet - to anticipate a full bladder and avoid wetting, or to extend the time until a toilet visit to increase bladder capacity. The interval between vibrations can be varied up to an alarm each 24 hours, to every minute, eg 2-4 hourly for bladder training or at specific times.
